

### Game Rules and Score Sheet

1. Each game has two players. Both players will use pennies as game pieces. One player will use a penny face up, the other face down.
2. Place the pennies on the start space over the player number of their choice.
3. Take turns rolling the die. Place an X in the column of the player who went first so that you will know who starts the next game. Players move their penny according to the number on the die. Even numbers move forward, odd number move backwards.
4. A game ends when one player goes off the game board either above start or below start, or if one player's score is 100 or more..
5. If a player goes off the game board above start, that person adds ten points plus the number on the die to their total score.
6. If a player goes off the game board below start, nothing is added to the player's score. The other player adds the point total of their space to their total score. Both players start with 20 points. A player wins when their point total is 100 or greater.
