

Sci Island Activity Sheet

Below you will find outline maps of the United States and a fictional land called "Sci Island" (SI). Divide each map into regions. Assign each region measurement titles: mass/amount of matter, volume, time, for example. Think and record as many comparative units used in the United States to measure each region's quantities and their metric system and/or SI unit equivalent.

United States of America (English system) from Worldatlas.com

Sci Island (SI) (Metric system)
