

NATURE

Season 26 - Spring 2008 Premieres

JANUARY 27

Parrots in the Land of Oz

They're the most conspicuous, exotic and varied birds in all of Australia, but parrots' destructive habits can be a nuisance. (IN HIGH-DEFINITION)

FEBRUARY 17

Arctic Bears

An up-close look at the changing worlds of the grizzly and polar bears, guided by the filmmakers that know them best.

FEBRUARY 10

Crash: A Tale of Two Species

The unassuming horseshoe crab, a 350-million-year-old evolutionary wonder, now has vital uses in scientific and medical technology, but its numbers are plummeting—and the existence of the tiny Red Knot bird hangs in the balance. From Emmy Award-winning filmmaker Allison Argo (*Chimpanzees: An Unnatural History*). (IN HIGH-DEFINITION)

APRIL 6 & 13
What Females Want and Males Will Do
two-part special

The two-part program explores the flamboyant behavior and anatomy that result from animals' urge to mate. Through cutting-edge technology and risky field study, charismatic animal experts illuminate what makes winners and losers in the animal dating game. (IN HIGH-DEFINITION)

APRIL 20

The Gorilla King

Primatologist Ian Redmond has studied Titus, king of the mountain gorillas of Rwanda, for 30 years, a tumultuous period in the history of the country and the species. (IN HIGH-DEFINITION)

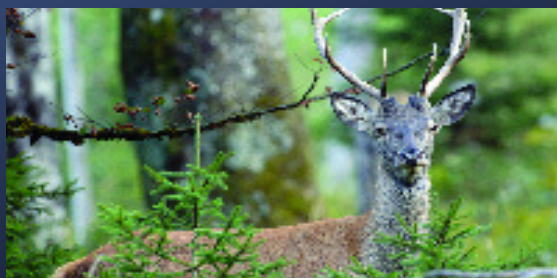

MAY 4
Superfish

Details the epic ocean journeys and bizarre life cycles of the largest and most highly prized of all game fish—marlins, swordfish, spearfish and sailfish. (IN HIGH-DEFINITION)

MAY 11

Prince of the Alps

High in the Austrian Alps, a red deer calf and his mother struggle to survive long migrations, the intrusion of modern civilization, and a bitter winter in the harsh alpine terrain. (IN HIGH-DEFINITION)

NATURE is produced for PBS by Thirteen/WNET New York.
